## PROJECTS

### Countries Search Box — *Self-learning project (still in progress)*
https://search-countries.vercel.app/

Countries search engine with a few filters, built in NextJs with ReactJS and Styled Components. I'm also using rest countries API (https://restcountries.eu/)

I'm building this app to learn more about the use of APIs and ReactJS. I'm not using any libraries because I need to improve my algorithm skills.

The next steps for this application are, add a details page for each country, make it responsive, integrate a weather API and refact it with typescript and redux.

### Bzinus Website — *Professional Website*
https://bzinus.pt/

Responsive website designed and built by me.
It uses NextJS, ReactJS and Styled Components.

### Licor Beirão — *Academic project for a Portuguese licor company, Licor Beirão.*
https://freewalkingtours.herokuapp.com/

Academic project for a Portuguese licor company, Licor Beirão.

Responsive design and form fields validation.

It's just a presentation, not a full application.

## EDUCATION

### FreeCodeCamp, Remote — *Certificate in JavaScript Algorithms and Data Structures*
March 2019 - September 2019

Basic JavaScript, ES6, RegEx, Basic Data Structures, Debugging, Basic Algorithm Scripting, Object Oriented Programming, Intermediate Algorithm Scripting, Final Projects

Information and Communication Technologies; Planning and Resource Management; Analysis and Systems Modeling; Databases; Statistical Information; Computer Applications; Quality Management; Archives Advanced Training.

**EXPERIENCE**

### Bzinus, Porto, Portugal — *Frontend developer & Co-Funder*

May 2020 - PRESENT

### Retail Consult, Porto, Portugal — *Project Manager*

May 2018 - June 2019

Working at Retail Consulting was a big challenger.

I was managing middleware projects remotely to implement Oracle solutions at Makro in South America.

### Fabamaq, Porto, Portugal — *Project Analyst*

June 2015 - March 2018

Working at Fabamaq is something unique. The team was amazing and the work interesting. We developed games. We created different worlds with lucky coins and cute pandas. We turned imagination into the real world. In order to get into the fantasy world we needed to make sure that things happen the way they should.

I was responsible for planning, monitoring and releasing the projects. I worked close to design, development, product and quality teams to ensure the final project was exactly as we envision it.

### Noesis, Lisbon, Portugal — *QA Consultant*

July 2013 - June 2015

I worked in a major telecommunication company, there, my main responsibilities were auditing and compiling code for the test and production environment.

I was testing software and managing the bugs at the same company.

### ATB, Bremen, Germany — *Technical Assistant*

July 2013 - June 2015

This opportunity was one of the most challenging experiences of my life. First, I moved to Germany, a foreign country, where I didn't know the language. There in the first moment I was assisting the management of European Union Co-funded Projects, helping with the proposals and reports. A few months later I started to develop a web based application, and I was also responsible for the maintenance and creation of the websites for each project.
